To All Operators of 4D MEG Systems:

The purpose of this message is to communicate directly to all operators of 4D MEG systems throughout the world so as to:

- State MISL's intention to establish a sustainable and high quality service division to meet your unique service and support needs, and
- Provide you with the opportunity to contact MISL if you have any questions or concerns.

MISL was formed in 2007 on the premise that MEG has a genuinely bright future if all the stakeholders in the community move ahead with a determination to learn from the past, and chart a more sustainable course.

MISL intends to acquire the assets of 4D Neuroimaging and utilize the success that MISL has realized servicing CTF/VSM customers around the world to form the foundation for a similar endeavour with 4D operators. The availability of MISL service for 4D operators should assure a viable future for the expected lifetime of 4D MEG equipment. If MISL succeeds in acquiring the necessary assets, we will be in direct contact with all current operators of 4D MEG equipment to initiate service agreements.

MISL, in its relatively short history, has established itself as a competent and fair provider of service in the MEG market. We are renowned to be customer focused and have also been able to launch a carefully managed manufacturing program for new CTF style MEG systems as well as a low cost refurbishment program.

MEG as a technology and business is growing and changing. MISL intends to be instrumental in facilitating this change and looks forward to working with all stakeholders to help develop a stronger and more vibrant MEG market and community of interest.

Please feel free to forward any comments or questions to me at your convenience.

Yours truly,

Tim Baird  
General Manager  
MEG International Services Ltd.
